

IPR GROUP ACTIVITY INITIATED AT HCTM

Intellectual Property Regime (IPR) has hardly been started in a coordinated manner in technical institutions in the country. The contact between the industry and the academic faculty is confined to individuals for only consultancy services. To make it a dynamic movement there is a strong need for closer interaction between the faculty on the one hand and the industry on the other. The objective provides practical solutions to some of the specific problems the industries may face from time to time. Besides the faculty can contribute towards innovation and upgrading of the technology in use in the concerned industries. Such an interaction may well lead to patents based on novel adopted products/devices as well as the processes followed by the industry. It will contribute to a more meaningful practical training and eventual placement of the graduating students engaged in more relevant project work. The group intends to start with the fabrication and testing of novel instruments/devices based on some patents that are yet to be exploited, commercially and may well have global significance through cutting-edge technologies employed. The college has therefore decided to utilize the services of a distinguished superannuated Professor, with recognized IPR talent (designated as Technology Angel in Electronics and Physics) by MOST (Ministry of Science & Technology), Govt. of India. The IPR group comprises of Prof. (Dr.) N. Nath, Dr. Rajesh Sharma, Dr. Parveen Gupta and Mr. Amit Vashisht.
